
Subway vs Citi Bike Ridership Before and After Covid Hit

— William Mai —

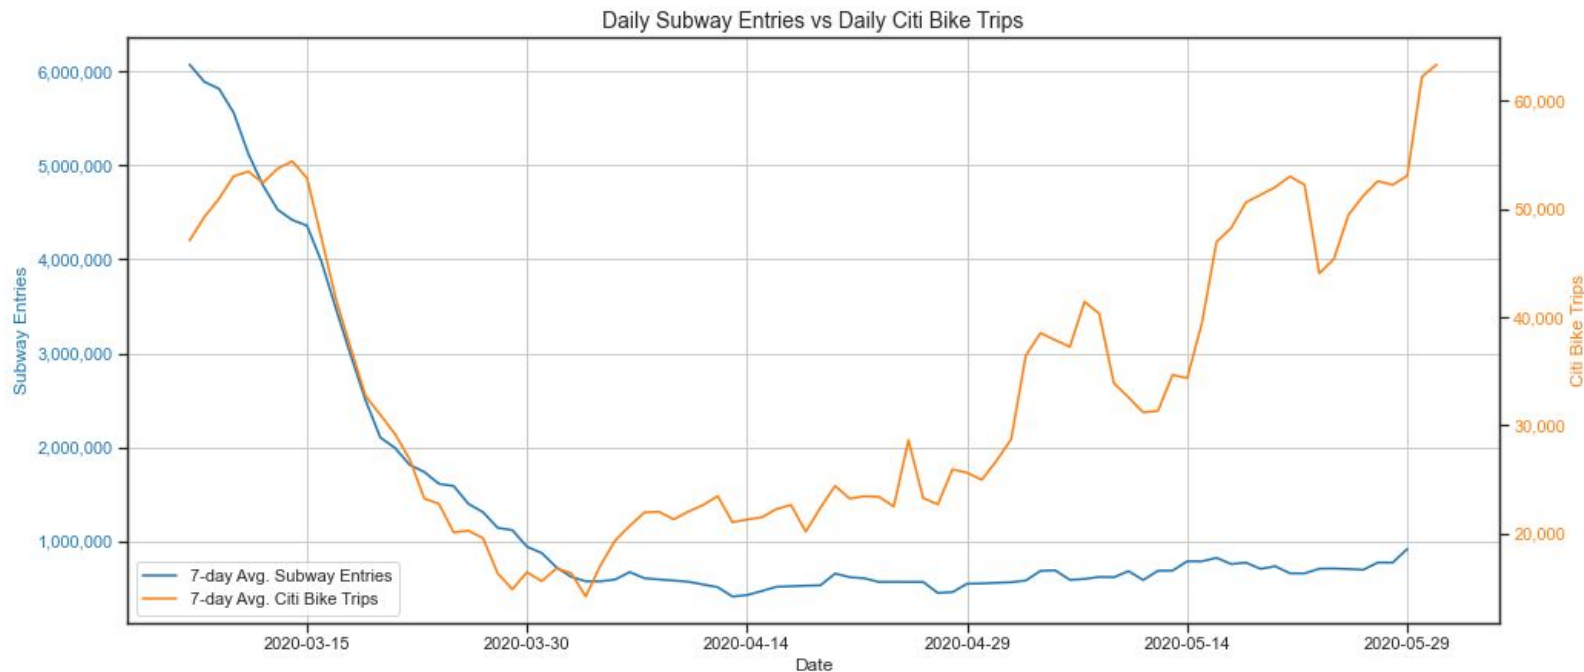

Introduction

- How did Covid change Subway and Citi Bike usage in New York City between March and May 2020?
- Could we observe a new usage pattern between March and May 2021?
- How should Citi Bike adjust the location and the number of bike stations to adapt the new usage pattern in different areas?
 - Transportation hub
 - Business district
 - Residential Area

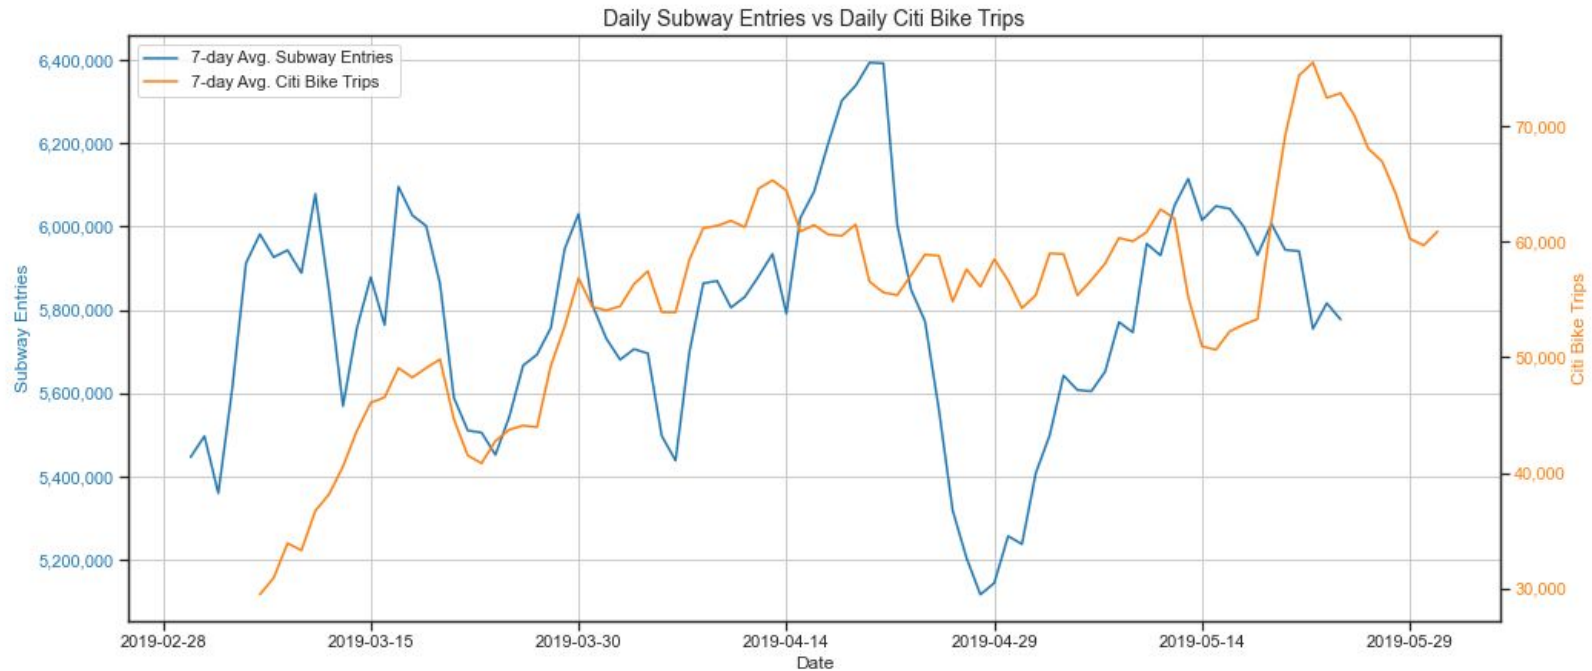

Methodology

- MTA Data: Daily entry count from March to May for 2019, 2020 and 2021
- Citi Bike Data: Daily bike trip from March to May for 2019, 2020 and 2021
- Matrics
 - Subway Daily Entry: 7-day moving average of daily entries
 - Citi Bike Daily Trips: 7-day moving average of daily bike trips

Conclusions

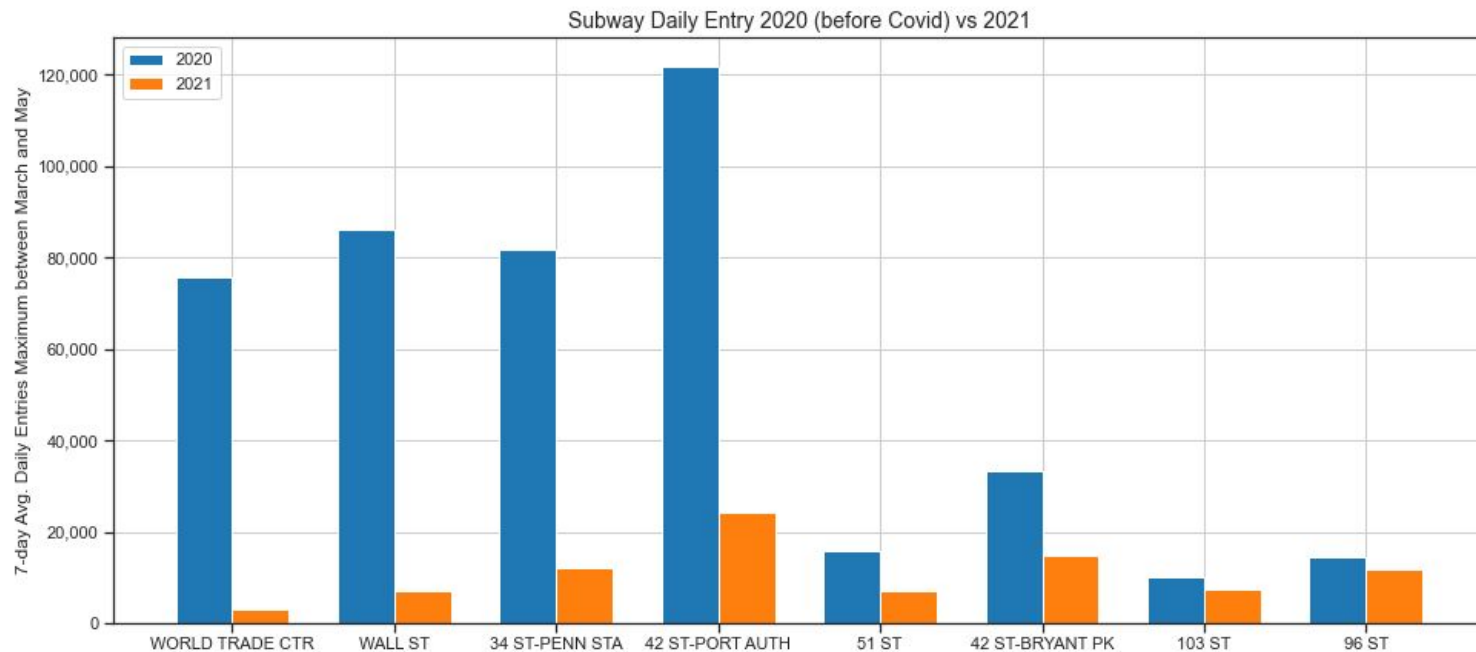

- Subway ridership was hit hard when Covid struck in March 2020
- Citi Bike rebounded back to previous year level by the end of May 2020
- Citi Bike usage pattern changed based on different types of area when compared with the same period between 2021 vs 2019
 - Transportation hubs: Usage had **remained** at the similar level
 - Commercial districts: Usage had **increased**
 - Residential Areas: Usage had **increased**

Future Work

- To develop a method to do the same analysis on more subway stations in a more efficient way
- Classify the subway stations into different groups, and study the Citi Bike usage based on these groups, groups such as by location, or by types of property around the station, etc.
